Scaling Scrum with Scrum@Scale

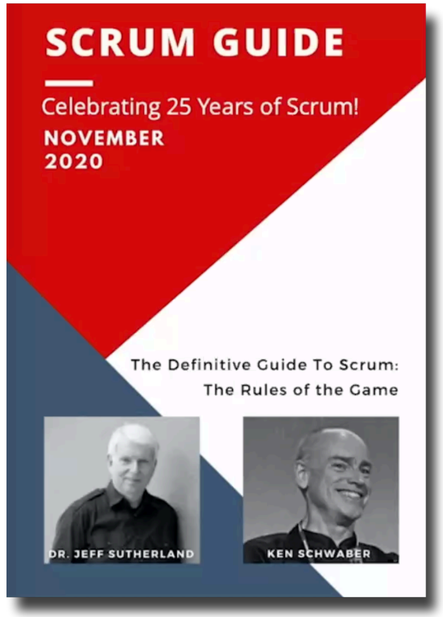

As a team of teams (SoS), I want to deliver an integrated product increment and remove impediments so that we can deliver twice the work in half the time.

Introducing the Scrum@Scale Guide

+

Addresses the three Mega-Issues:

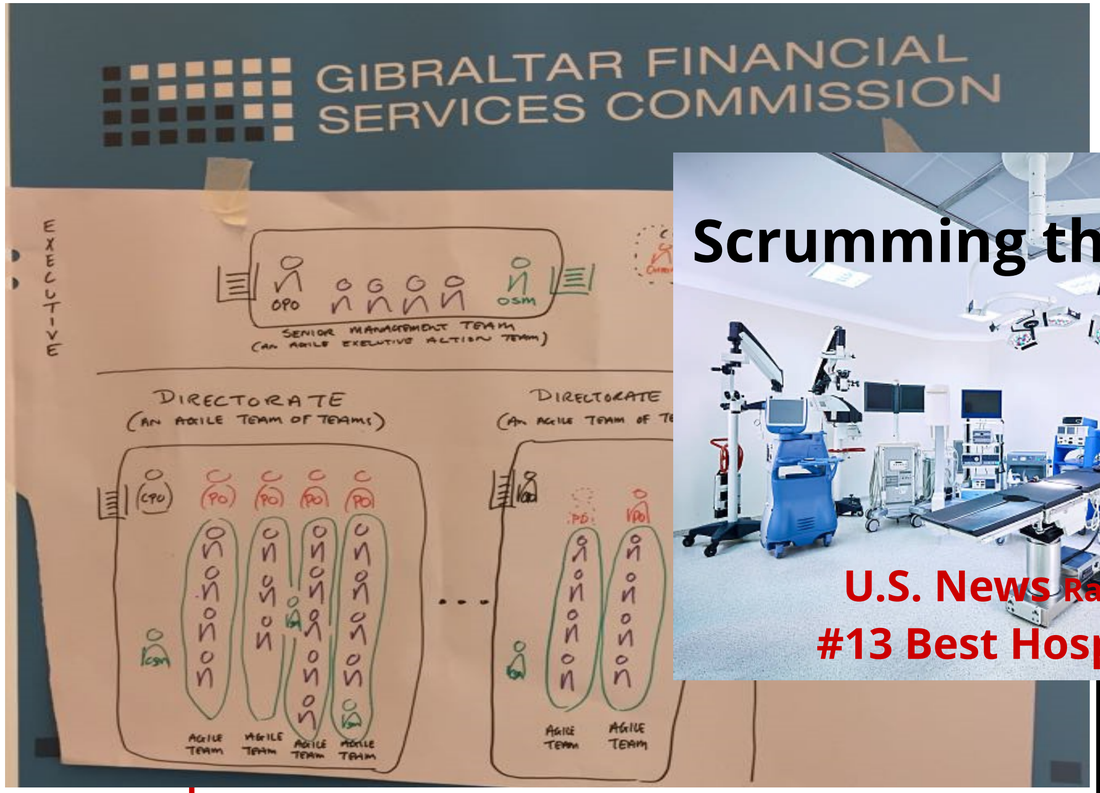

- **#1 Prioritize:** Limited resources, ability to focus
- **#2 Deliver:** High-quality, working product is primary measure of progress
- **#3 Refactor:** Ability to change fast – product AND organization

Linear Scalability: Scale-Free Architecture

- If you want to linearly scale, you need a “scale-free” architecture
- Otherwise you risk introducing waste into the system and slowing the whole organization down
- **Scale-free architectures are pervasive in biology (ex. neural networks)**
- **They are able to evolve to perform new functions more rapidly than alternative network designs**

Digital Darwinian world reveals architecture of evolution

Source: http://chronicle.uchicago.edu/061207/darwin.shtml

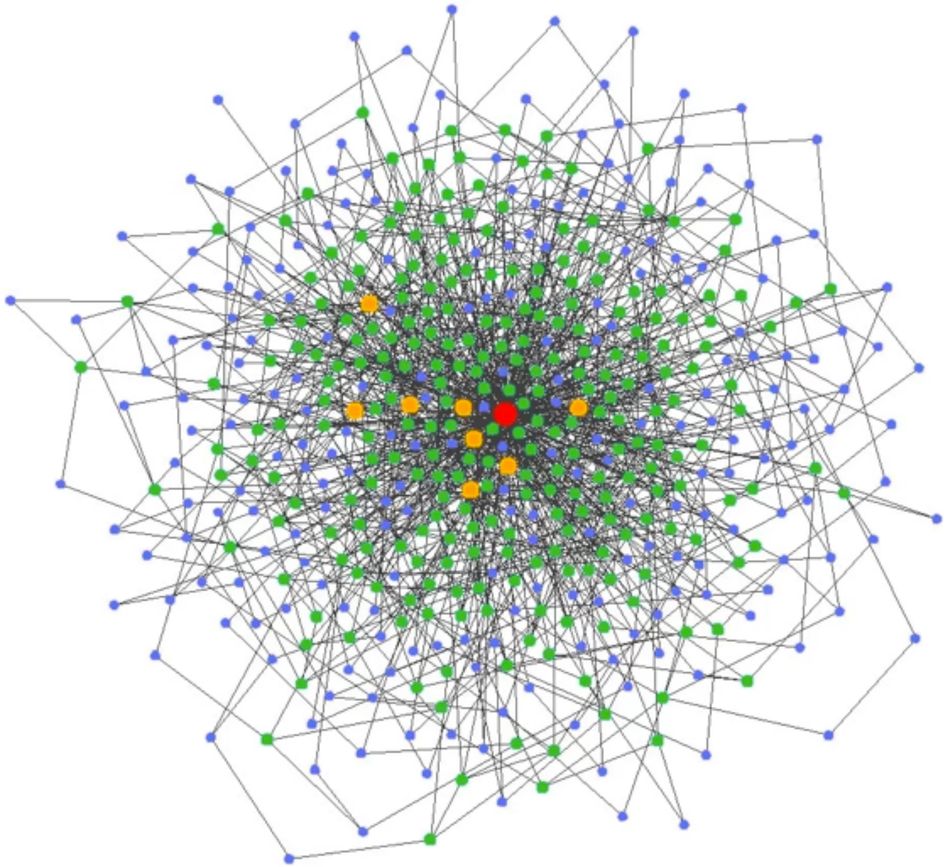

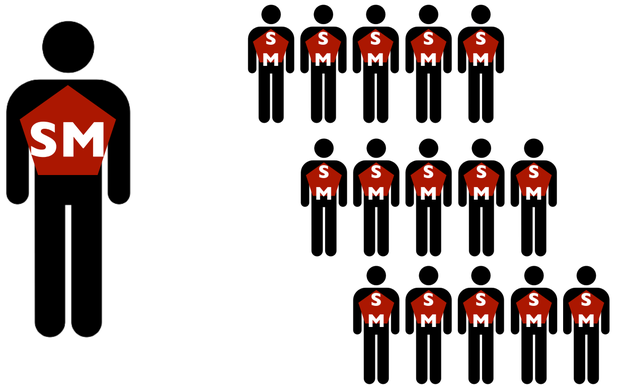

Diagram of a scale-free network that contains components with a highly diverse level of connectivity. Some components form highly interconnected hubs, while other components have few connections, and there are many levels of interconnectivity in between. Scale-free networks are pervasive in biology. Computer simulations at the University of Chicago show that scale-free networks are able to evolve to perform new functions more rapidly than an alternative network design.

Scaling the Scrum Master

The Scrum Master from the Team Perspective

- **Servant leader**
- Ensures work & impediments are made visible
- Protects the Team from interruptions
- Coaches the Team in Scrum
- Facilitates Scrum events
- **Owns impediment removal**
- Implements the Scrum & Agile values
- Promotes Kaizen thinking & waste reduction
- Helps to maintain external radiators of team progress

The Scrum of Scrums Perspective

The Scrum of Scrums (SoS) is:

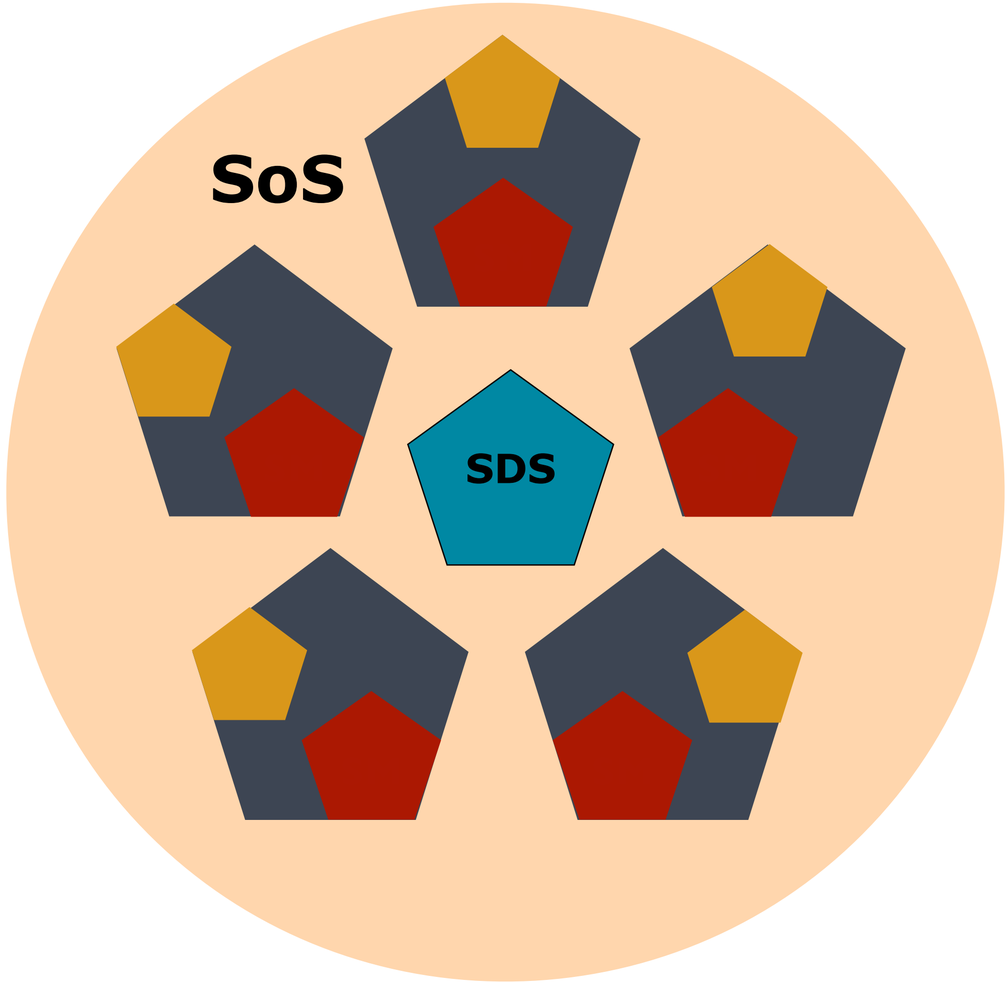

- not an event
- a set of teams that have a need to coordinate
- a “Team of Teams”
- responsible for a shippable increment of product at the end of a Sprint and must work closely with the Chief Product Owner

© 1993-2019 Jeff Sutherland & Scrum Inc.

Scaled Daily Scrum (SDS)

- This is an event facilitated by a Scrum of Scrums Master (the SoSM)
- Enables Cross-Team Coordination
- The SDS event mirrors the Daily Scrum in that it:
  - is an opportunity to re-plan in order to achieve the Sprint goal for the SoS
  - surfaces & removes impediments if possible
  - Shares learning for Continuous Improvement

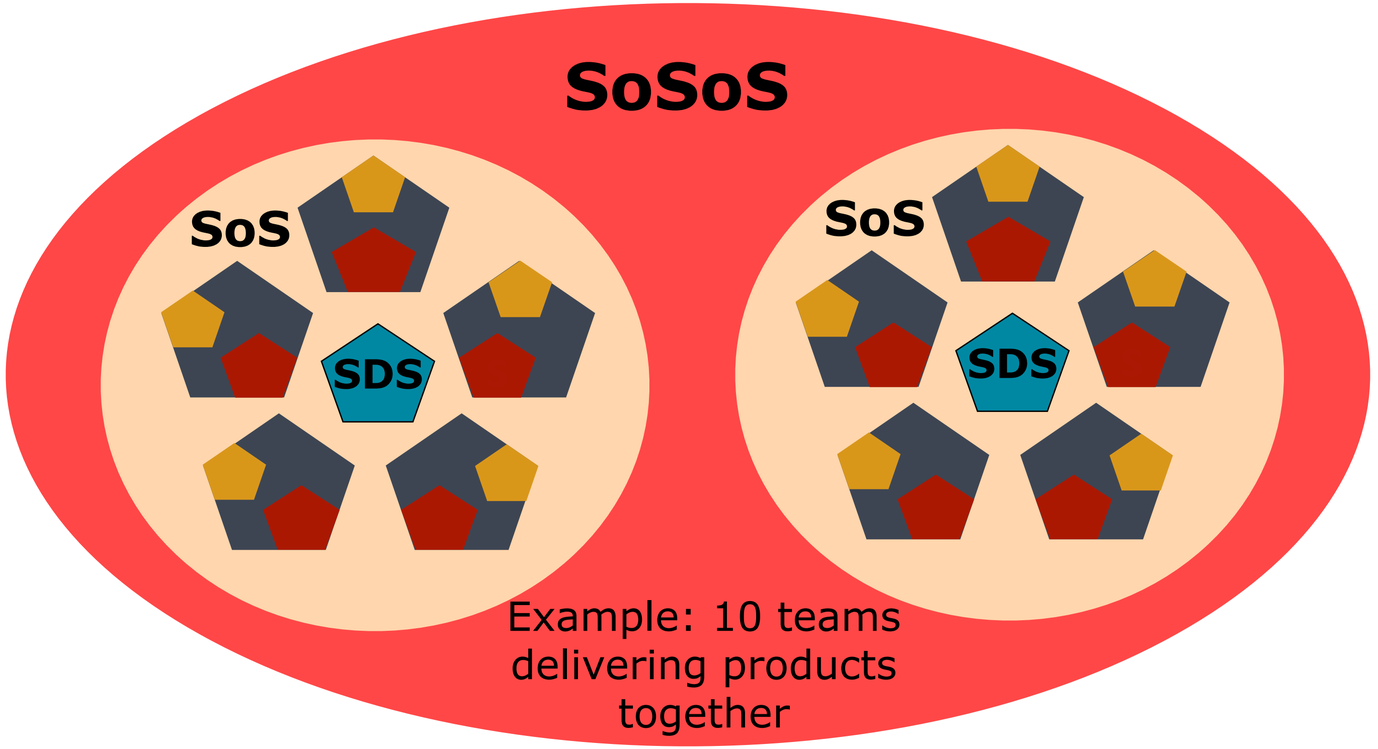

Example: 5 teams delivering products together

© 1993-2019 Jeff Sutherland & Scrum Inc.

Scrum of Scrum of Scrums Perspective

- For very complex products, the SoSoS is a Team of Team of Teams
- This is an organic pattern of Scrum Teams that is infinitely scalable

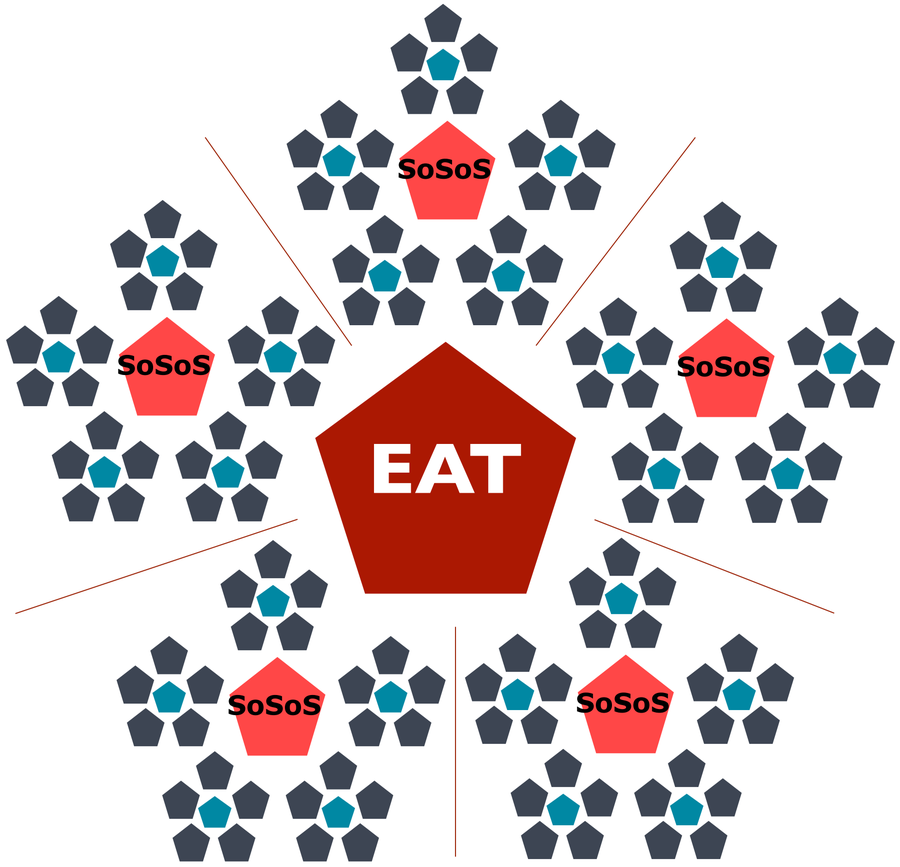

© 1993-2019 Jeff Sutherland & Scrum Inc.

Executive Action Team Perspective

Example: 125 Teams in 5 Value Streams

- EAT – Eats Impediments
- Ones the teams & SoS cannot remove by themselves
- Mirrors Daily Scrum in conciseness
- Limits Communication Pathways
  - (300 vs. 195,000)

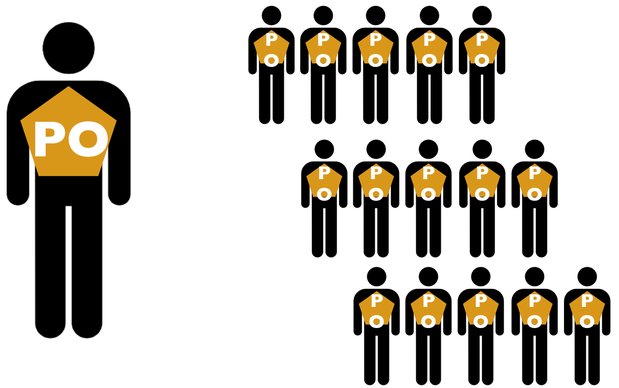

Ex. 125 teams (625 people) delivering products together

- Cross-Value Stream Coordination
- Ex: 625 People Coordinate in 60 min.
- Owns Organizational Transformation Strategy
- Executes Transformation Strategy or delegates it to the Agile Practice

Scaling the Product Owner

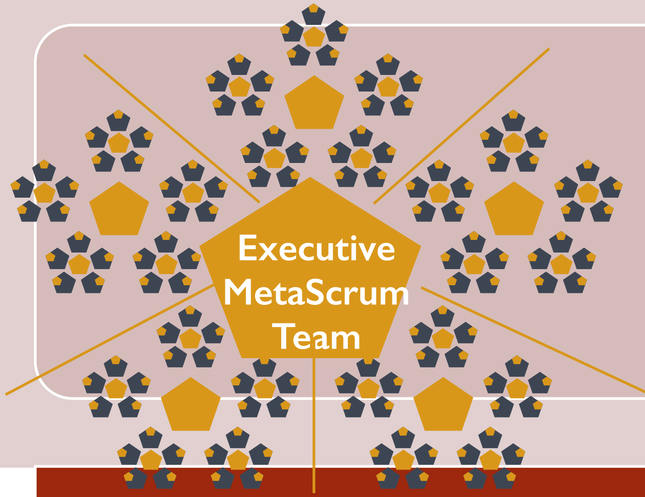

Product Owner

- Team
- Sprints
- Validated Learning

Chief Product Owner

- Multiple Teams
- Roadmap
- Coordinating teams

Chief Chief Product Owner

- Value Streams
- Vision
- Organizational Priorities

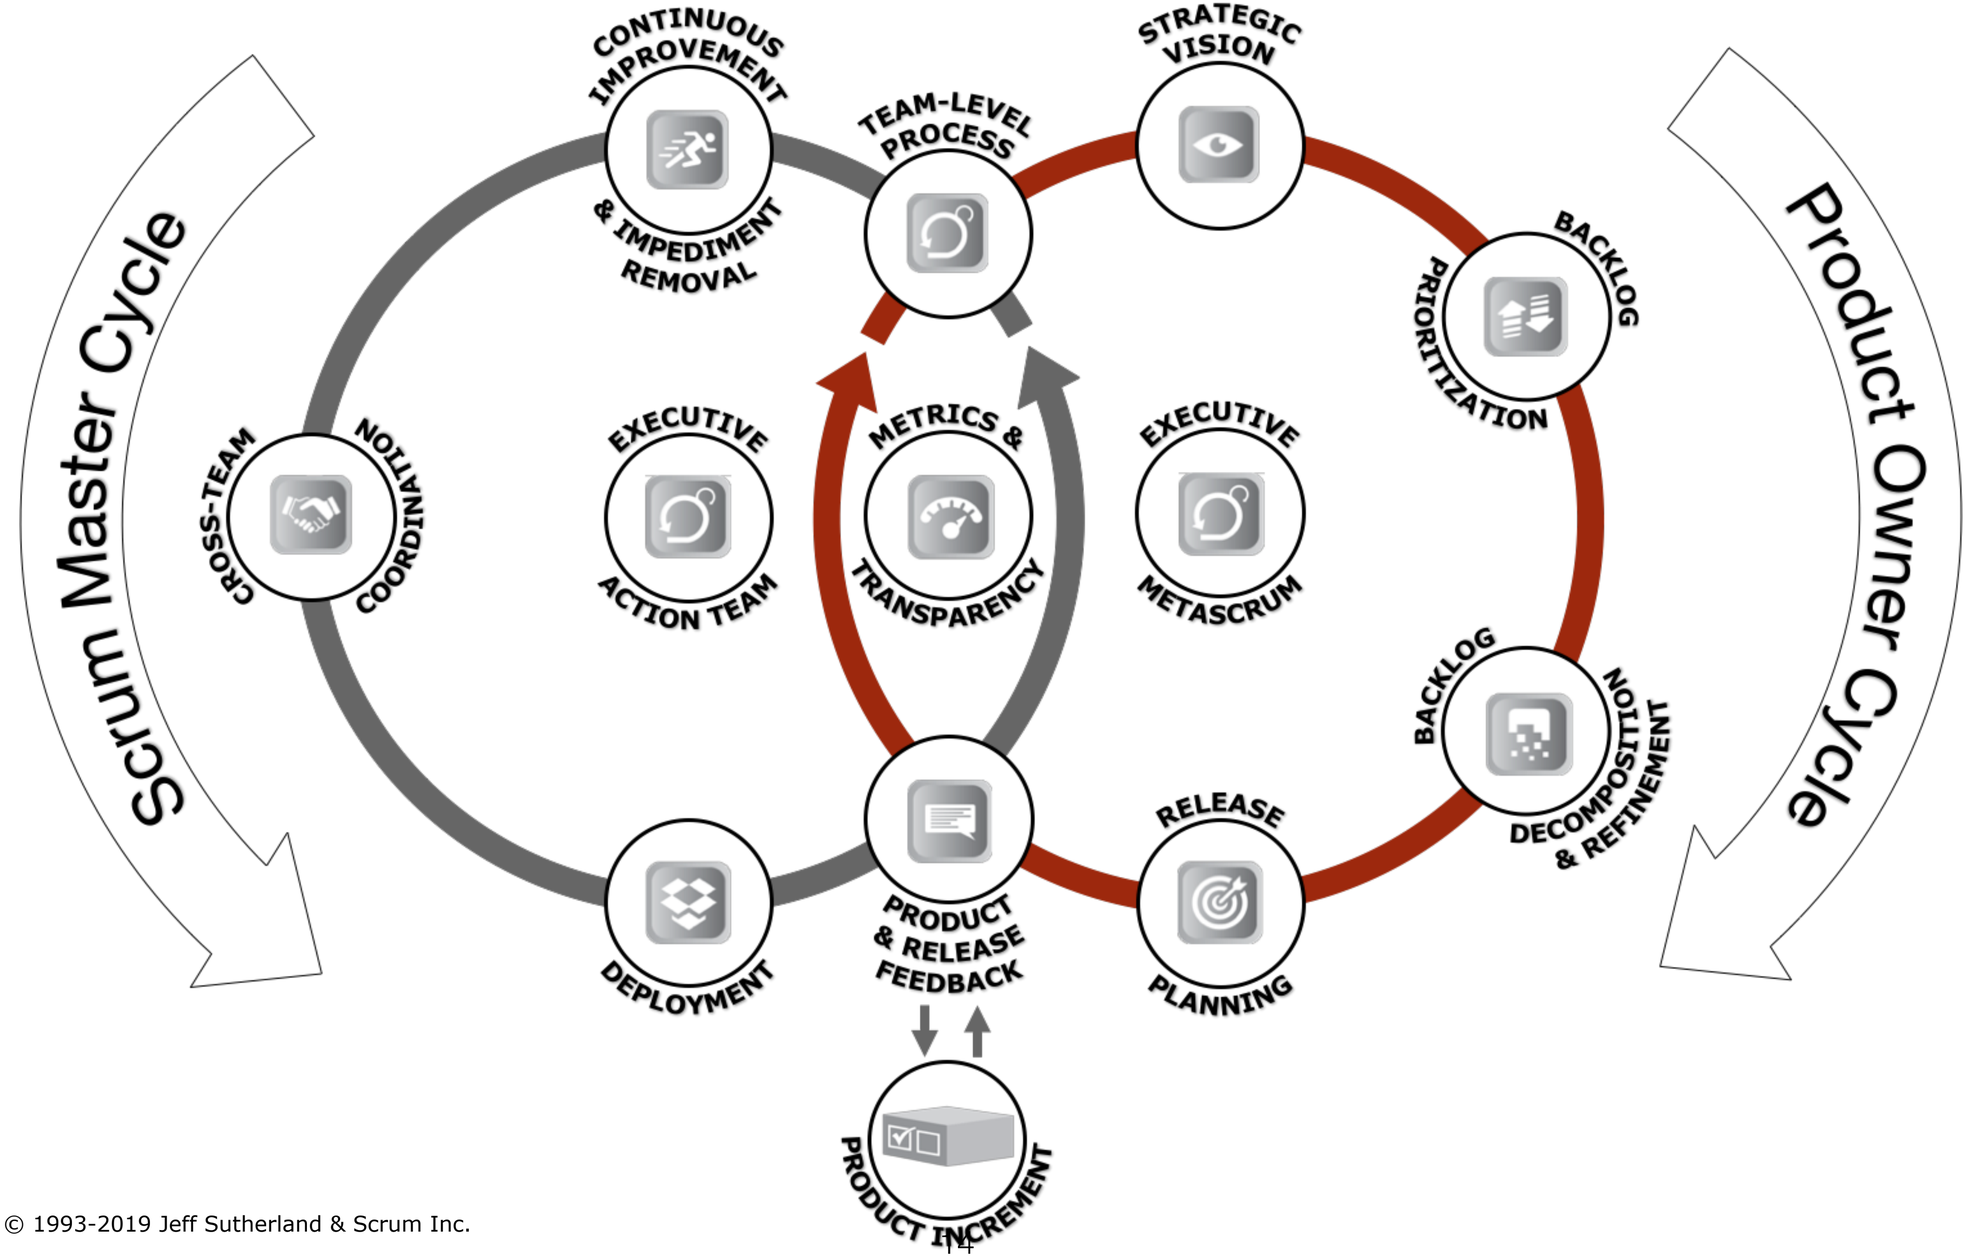

© 1993-2019 Jeff Sutherland & Scrum Inc.

The MetaScrum: Aligning the Stakeholders

- A MetaScrum is a gathering of Key Stakeholders, Leadership, Product Owners, and Team members that meets at least once a sprint
- Run by Chief Product Owner
- Examines validated learning and feedback to see if anything changes the strategy or priorities
- Aligns enterprise around single backlog
- *The* forum for stakeholders to express preferences, remove blocks and provide resources needed (they should not try to alter product vision between MetaScrums)

SCRUM @SCALE

Real Life Structures: Asymmetry

5 SoS's with 2, 3, 4, & 2x5 Teams

3 SoSoS's with 10, 13, & 15 teams

Certified Scrum@Scale Practitioner Course

- **2-day** hands-on training course delivered globally by a Certified Scrum@Scale Trainer
- **Learn** how to apply fundamental Scrum and Lean product development skills to scale Scrum from one to many teams across any sized initiative
- **Build** a scaling map for your organization using the components of the Scrum@Scale framework

Craig Lavere

Has completed Scrum Inc.'s Scrum@Scale course and is a Certified Scrum@Scale Practitioner.
